

CMPS-6730 Introduction Repository Files/Folders
Restaurant Review Sentiment Classifier
Aaron Dumont
H. Jacob Schenck

Introduction to Code:

We have organized our GitHub repository into the following files and folders:

1. README file - this provides our project summary with key data figures and examples from our models.
2. Our class presentation powerpoint file.
3. Our Final Project Report file.
4. Full Model folder - contains our full model for sentiment aspects and overall sentiment classification for restaurant reviews.
 - a. This contains our full model trained using VADER proxy-labeled data from over 1.5 million restaurant reviews
(FullModel-FinalProject-DumontSchenck-WorkingCopy colab notebook)
 - b. The pretrained tokenizer and transformer models
 - c. The original datasets
 - d. A PDF of the output from our full model with training
 - e. **The Full-Pretrained model to test our sentiment classification model (Full-PretrainedModel colab notebook) - asks for user to enter restaurant review and provides sentiment classification for food, service, ambiance, price, context and overall**
5. Overall-SentimentModel folder.
 - a. This contains our full model for overall sentiment sentiment classification trained on human-labeled data from over 1.5 million restaurant reviews
(OverallSentiment-StarLabels-Full Model for Training colab notebook)
 - b. The pretrained tokenizer and transformer models
 - c. The original datasets
 - d. A PDF of the output from our full model with training
 - e. **The Full-Pretrained model to test our overall sentiment classification model (Pretrained OverallSentiment-StarLabels colab notebook) - asks for user to enter restaurant review and provides classification for overall sentiment**
